Start of Block: Introduction

Q1 Thank you for participating in a research study conducted by the University of Mannheim, Germany. This survey contains questions regarding your political views and beliefs. Your responses will be stored anonymously and kept completely confidential. They will be used for scientific research only. All records from the study will be processed and stored on a password-protected computer at the University.

It is very important that you pay close attention to the questionnaire. Please note that this survey includes validation questions to check whether you actually take the time to read instructions closely. You may not continue if you do not answer them correctly.

Your participation is voluntary, and you are free to withdraw from the study at any time. It should take no more than 15 minutes. For any questions about the study, please contact Hyeonho Hahm at hahm@uni-mannheim.de.

By continuing with this interview, it means that you agree with the above terms and conditions.

Q10 *Please read the following information about the European Union (EU). Please take your time to read it carefully.*

Recently, many experts have argued that the European integration should be pushed further.

They say that to address the main challenges facing the EU and its member countries, their national governments should act in a coordinated way with the other EU countries. Despite the cross-border issues, the national governments of the EU member states have resisted a further transfer of power to the EU.

A recent study by leading researchers also finds the evidence to support this view using an advanced statistical method. According to this research, the precise estimate of what they call "EU competence" is strikingly smaller than what many people want.

Q59

This game is played by pairs of individuals. Each pair is made up of a Player 1 and a Player 2. Each player will have some information about the other player, but you will not be told who the other players are during or after the experiment.

The game is conducted as follows: A sum of 10 tokens will be provisionally allocated to Player 1 at the start of each round. Player 1 will then decide how much of the 10 tokens to offer to player 2. Player 1 could give some, all, or none of the 10 tokens. Player 1 keeps all tokens not given to player 2. Player 2 gets to keep all the tokens Player 1 offers.

You will play this game three times with three different people.

The more tokens you obtain, the more successful you will be. // Randomize the Order of Dimensions (avoid recency and primacy) var attRaw = ["Age", "Gender","Social Class","Religion", "Party Affiliation","Nationality", "EU"]; var att = ["Age", "Gender","Social Class","Religion", "Party Affiliation","Nationality", "EU"]; var attributes = ["","","","","","","","]; for (i=0; i

Q128
This game is played by pairs of individuals. Each pair is made up of a Player 1 and a Player 2. Each player will have some information about the other player, but you will not be told who the other players are during or after the experiment.

Each player will receive 10 tokens. Player 1 then has the opportunity to give a portion of his or her 10 tokens to Player 2. Player 1 could give some, all, or none of the 10 tokens. Whatever amount Player 1 decides to give to Player 2 will be tripled before it is passed on to Player 2. Player 2 then has the option of returning any portion of this tripled amount to Player 1.

Then, the game is over.

Player 1 receives whatever he or she keeps from their original 10 tokens, plus anything returned to him or her by Player 2. Player 2 receives their original 10 tokens, plus whatever he or she keeps after returning any portion of the tripled amount to Player 1.

You will play this game three times, with three different people.

The more tokens you obtain, the more successful you will be.

Q129
We will now run through 3 examples to show you how the game might be played.

Example 1
Imagine that Player 1 gives 4 tokens to Player 2. We triple this amount, so Player 2 gets 12 tokens (3 times 4 tokens equals 12 tokens). At this point, Player 1 has 6 tokens. Then Player 2 has to decide whether to give any portion of this tripled amount (12 tokens) back to Player 1, and if so, how much.

Suppose Player 2 decides to return 3 tokens to Player 1. At the end of the game Player 1 will have 9 tokens and Player 2 will have his or her original 10 tokens, plus 9 tokens (the amount Player 2 keeps for himself or herself).

Example 2
Imagine that Player 1 gives 3 tokens to Player 2. We triple this amount, so Player 2 gets 9 tokens (3 times 3 tokens equals 9 tokens). At this point, Player 1 has 7 tokens. Then Player 2 has to decide whether to give any portion of this tripled amount (9 tokens) back to Player 1, and if so, how much.

Suppose Player 2 decides to return 0 tokens to Player 1. At the end of the game Player 1 will have 7 tokens and Player 2 will have his or her original 10 tokens, plus 9 tokens (the amount Player 2 keeps for himself or herself).

Example 3
Imagine that Player 1 gives 10 tokens to Player 2. We triple this amount, so Player 2 gets 30 tokens (3 times 10 tokens equals 30 tokens). At this point, Player 1 has 0 tokens. Then Player 2 has to decide whether to give any portion of this tripled amount (30 tokens) back to Player 1, and if so, how much.

Suppose Player 2 decides to return 3 tokens to Player 1. At the end of the game Player 1 will have 3 tokens and Player 2 will have his or her original 10 tokens, plus 27 tokens (the amount Player 2 keeps for himself or herself).

Player 1: You are Player 1. You have 10 tokens for this game. Put the amount of tokens you want to be tripled and passed on to Player 2 in the box labeled "Player 2". Put the amount you want to keep for yourself in the box labeled "Player 1". You can give Player 2 some, all, or none of the 10 tokens. Player 2 will receive this amount tripled by us. Remember the more you give to Player 2 the greater the amount of tokens as his or her disposal. While Player 2 is under no obligation to give anything back, we will pass onto you whatever he or she decides to return.

Q196

We would like to get your feelings toward some political parties and political leaders in the news these days. Below there is a list of parties and people. I'd like you to rate them using something we call the feeling thermometer.

Ratings between 50 degrees and 100 degrees mean that you feel favorable and warm toward the party or person. Ratings between 0 degrees and 50 degrees mean that you don't feel favorable toward the party or person and that you don't care too much for that party or person. You would rate the political party or the person at the 50 degree mark if you don't feel particularly warm or cold toward the person.
